INTRODUCTION

— AND —

DESCRIPTION OF SYSTEMS OF SURVEY.

In this work will be found several new features which will render the Atlas more valuable, as well as more attractive than similar works heretofore published.

An Atlas should indicate clearly and at a glance, the correct location of a piece of land in Section, Town and Range. In this work each Section is plainly numbered, and its boundary shown by colored lines. On the margin of the map are given the numbers of the Town and Range, and each Town (Congressional) is distinctively colored. Each Civil Township of Miami County (except one), contains parts of different Congressional Towns, and this make-up of the Civil Townships is clearly shown by the system of coloring. Where there are two Sections of the same number in a Civil Township, the map shows why it is so, and gives at a glance the distinctive Town and Range numbers of the Sections.

Upon the township maps the highways are represented by full black lines which show them as they are, the prominent landmarks. Woodland is represented by conventional shading, giving an idea of the landscape and character of farms.

In the corporation and village plats the minute figures show dimensions of lots, width of streets, etc. The additions are separately colored, and the name of the dedicatee given.

The scale of the township maps is 120 rods to the inch. The scale of the plats is given with each.

The U. S. Rectangular Survey.

That part of Miami County lying west of the Great Miami river is practically a part of the United States Rectangular Survey, first used in the Northwest Territory. This plan, arranged by James Mansfield, surveyor general of the Northwest Territory, and adopted by Congress in 1802, may be briefly described as follows:

First, a north and south line is run through the tract determined upon to be surveyed. This line begins at some prominent or easily distinguished point, and is designated as a "Principal Meridian." Then a line running east and west, at right angles with the first line, is run through the tract, called the "Base Line."

The first Principal Meridian west of Washington is the west boundary of Ohio, which was run north from the mouth of the Great Miami river. It is 80° 51' longitude west from Greenwich.

Lines are then run north and south parallel to the Principal Meridian, and six miles apart, which divide the territory into long north and south strips, called Ranges, which are numbered in their order, 1, 2, etc., East of the Meridian, also the same West of it. Across these are run lines six miles apart, parallel to the Base Line, cutting the territory into long east and west strips called Towns, and these are numbered North and South from the Base Line.

By this "cross lining" the territory is divided into squares, six miles on a side. Each of these squares is a Congressional Town. Such "Towns" sometimes, but often do not, correspond to the Civil Townships, which are known by popular names. The only designation of Congressional Towns is their Range and Town numbers.

For the survey including Miami County west of the river, the Principal Meridian was the West State Line, the Base Line the Great Miami river, and Towns are numbered north from the river. As the Base Line was the river, running northeast, the Towns of the same number do not lie in an east-west row, but Town 7, Range 6, lies directly east of Town 8, Range 5, and the latter is in the same row with Town 8, Range 4. Going east and taking a given Town in Range 4, the next in Range 5 is numbered 1 less; in Range 6, 2 less than in 5.

After the tract is surveyed into Towns six miles square, the Towns are divided into thirty-six tracts, called "Sections," each containing one square mile, more or less.

The Sections are run off very much as were the Towns, using each Town's east range line and south town line as bases. Commencing one mile west of the southeast corner of the Town, the surveyor runs north a mile, then east a mile to the east range line and corrects back to the northwest corner of the section. He sets a quarter post (or half mile post) on the west line of the section at forty chains north of the starting point, and sets the quarter post on the north line of each section half way between the northwest and northeast section corners. The surveyor proceeds to run off the remaining sections on the east tier, up to the north line of the Town, placing the last section corner where his north-and-south line intersects that north Town Line, whether this point is east or west of the section corner previously established in the Town survey. The distance between the two corners, if any, is called the "jog," and is recorded.

The government sub-divisions of the section (although they are not actually surveyed by the government surveyor) by which the lands are sold, are "quarter"

sections or 160 acres, "half-quarter" sections or 80 acres, and "quarter-quarter" sections or 40 acres. The section is divided into quarters by running a straight line north and south, and one east and west between the quarter posts on the sides of the section. The quarter sections are "halved" by running a straight line north and south or east and west (whichever way it is wished to divide it) from points midway by measurement of opposite sides. The quarter sections are quartered by running lines north and south and east and west between points at the center of each side of the quarter section. Other smaller sub-divisions can be made on the same principle.

It will be seen from this that if a section is perfectly square and contains the exact number of acres, that this method would subdivide it into tracts of equal areas, but it hardly ever occurs that a section is exactly square or contains the exact number of acres. Consequently it almost always occurs that the sub-divisions will differ more or less in quantity. Yet the government has established this as the only method by which the sub-divisions shall be made, and making the eight corners established on the exterior lines of each section "the corners," however incorrect they may be.

The sub-divisions of the section in the preceding diagram, as it is divided into the "Government descriptions," are each described in brief on the diagram. The sections are described as No. —, Town — North, Range — East (of the First Principal Meridian).

Miami Rivers Survey.

The survey of that part of Miami county which lies east of the Great Miami river, was made in a different manner. The land between the Miami river, north of Symmes' purchase, was surveyed (1802 and prior) as government land, by Col. Israel Ludlow, who first platted Cincinnati and Dayton. This survey was in six mile townships, which Col. Ludlow divided into squares of two miles, and which were afterward sub-divided into sections one mile square, "more or less." Ludlow used Towns and Ranges in reverse order to the plan above described. In his system the Towns are the north-south tiers, numbered eastward from the Great Miami, and the Ranges are the east-west rows, numbered northward. The Sections are numbered from the south-east corner of the Township, north, and the successive westward tiers in the same order. Complete descriptions of regular sub-divisions are the same as above described, except that instead of town north (or south), range east (or west), the statement is "town —, range —, Miami Rivers Survey."

Table of Measurements.

LINAR.

16½ Feet	= 1 Rod.	7.92 Inches	= 1 Link.
80 Rods	= ½ Mile.	100 Links	
160 Rods	= ½ Mile.	66 Feet	{ = 1 Chain.
320 Rods	= 1 Mile.	4 Rods	
5280 Feet	= 1 Mile.	80 Chains	= 1 Mile.

SQUARE.

272½ Square Feet	= 1 Square Rod.
160 Square Rods	= 49,560 Square Feet = 1 Acre.
640 Acres	= 1 Square Mile = 1 Section.
1 Square Acre is	{ 12.66 Rods Square. 208 Foot, 8½ Inch Square. 3 Chains, 10½ Links Square.

INDEX TO PLATS.

AN ALPHABETICALLY ARRANGED INDEX OF LAND OWNERS, AS SHOWN BY THE COUNTY RECORDS, INDICATING AT A GLANCE
THE NAMES OF FARM OWNERS, WITH THE SECTION AND CIVIL TOWNSHIP IN WHICH THE
LAND MAY BE FOUND UPON THE PLATS OF THE ATLAS.

EXPLANATION.—The name of land owner, section in which land is found, and civil township, are given in succession. Where there are two sections of the same number in a civil township, town and range are given.

BROWN

This historical map, titled "TOWN 2" and "RANGE 11", provides a detailed view of a town's layout and property ownership in 1860. The map is divided into sections, with Section 11 being the focus. Key features include:

- TOWN LINES:** Indicated by dashed lines.
- RANGE LINES:** Indicated by solid lines.
- SECTION LINES:** Indicated by dotted lines.
- PROPERTY OWNERS:** Numerous names are plotted, such as John Partington, Harry Berryhill, W.H. White, Louise Roberts, A.M. Berryhill, John W. Brown, W.T. Trotter, Joseph S. Duer, John H. Moore, James Wilson, John L. Berryhill, A.J. Moore, J.S. Duer, F.M. Berryhill, H.S. Harmony, A.J. Allen, James Carter, W.H. Precount, Geo. W. Precount, Mary A. Holton, and many others.
- LANDMARKS:** Roads, rivers, and other local features are labeled.
- STRUCTURES:** Schools and cemeteries are marked.

SPRING CREEK

[5]

MAP OF UNIO

TOWN 7, RANGE

This historical map of Town 6, Range 5, provides a detailed view of land parcels, roads, and early settlers. The map is organized into a grid system with numbered sections (1 through 35) and lettered townships (A through H). Key features include:

- Rivers and Creeks:** Loyalton Creek, Loyalton River, and Loyalton Falls.
- Settlements:** LAURA, RANDOLPH SETTLEMENT, MILTON, and POTOSI.
- Landmarks:** BAPTIST CHURCH, METHODIST CHURCH, and various schools labeled A through H.
- Names of Settlers:** Numerous names are listed across the map, such as Jones, Young, Daniel Jenkins, John Clappuck, Isaac Coppock, John E. Heiss, W.H. Moore, D.W. Elteman, J.W. Spiller, and many others.
- Boundaries:** Section lines and township boundaries are clearly marked.

The map is a valuable resource for understanding the early history and settlement patterns of the area.
